SUMMARY

Backend engineer with 2+ years shipping production distributed systems — Kafka ingestion with change data capture, Elasticsearch indexing, and gRPC/Protobuf contracts between Java Spring Boot and Python services on Kubernetes. Sets code review standards, drives design decisions adopted across services, and has led a platform from inception to production.

TECHNICAL SKILLS

- Languages: Java, Python, TypeScript, Go, JavaScript, C++
- Distributed Systems: Spring Boot, Microservices, System Design, Service Discovery (Eureka), API Gateway, gRPC, Protobuf, REST, GraphQL, FastAPI, Node.js, NestJS
- Streaming & Search: Kafka, Change Data Capture, Dead-Letter Queues, Consumer Retries, AWS SQS/SNS, Elasticsearch, OpenSearch, PostgreSQL Full-Text Search
- Data & Cloud: PostgreSQL, MySQL, MongoDB, Redis, pgvector; AWS (EC2, S3, RDS, ECS/Fargate, EKS, Lambda, IAM, VPC), Kubernetes, Docker, Terraform, GitHub Actions, CI/CD
- Observability & AI: Datadog APM, CloudWatch, JVM profiling (VisualVM, JProfiler, JFR); multi-agent workflows, Model Context Protocol (MCP), LangChain, LangGraph, RAG

WORK EXPERIENCE

Strique (Marketing OS) | Software Engineer | June 2025 - Present

Java, Spring Boot, Kafka, gRPC/Protobuf, Python, PostgreSQL, Elasticsearch, Kubernetes, AWS

- **Set and enforced code review standards across the team and drove technical design decisions adopted across services.**
- Built **Kafka** ingestion pipelines publishing events from third-party marketing APIs (Shopify, Meta Ads, Google Merchant Center) into **PostgreSQL**, cutting client onboarding ~40%; hardened them with **change data capture**, **consumer retries**, and **dead-letter queues** so failed events never stall ingestion.
- Built an **Elasticsearch/OpenSearch** indexing pipeline synced to the PostgreSQL source of truth; tuned analyzers, mappings, and relevance ranking, and managed index lifecycle, shards, and reindexing.
- Designed **gRPC/Protobuf** contracts between **Java Spring Boot** services and Python AI microservices, with Kafka topics and **AWS SQS/SNS** for async service-to-service eventing.
- Deployed and operated containerized services on **Kubernetes** in production; profiled JVM services with **Datadog APM** and VisualVM/JProfiler/JFR to fix data-processing inefficiencies.
- Architected multi-agent AI workflows and an **MCP** connector system for GA4, Search Console, TikTok, and Mailchimp, with PostgreSQL schemas for conversation persistence and query routing.

26ideas | Software Engineer | June 2024 - April 2025

Spring Boot, NestJS, Java, TypeScript, Next.js, PostgreSQL, Prisma, AWS, Docker

- **Led product and engineering for a production CRM and venture-management platform** from inception to launch, reducing team coordination overhead ~50%.
- Designed a decoupled **microservices** backend of 14+ independently deployable services across **Spring Boot**, NestJS, and Node.js, with **service discovery** via Eureka and unified routing through an **API Gateway**, following production **distributed systems** patterns.
- Shipped an AI email summarizer and idea-to-execution tracker on OpenAI embeddings and vector search; managed **AWS S3/IAM** and JWT-backed **RBAC** across every service.

SELECTED PROJECTS

Go MCP Server — Multi-Namespace Protocol Server

Go, net/http, PostgreSQL + pgvector, Kafka (Confluent Cloud), Docker

- Built a multi-namespace **Model Context Protocol** server in **Go** where five namespaces self-register via package init() on one stdlib mux, so adding a namespace is a package plus a blank import and main.go never changes.
- Enforced per-route auth in the middleware chain and per-caller data scoping: rows and Kafka records owned by a resolved API key id, isolated consumer groups, and client owner headers stripped so ownership cannot be forged.

Tickisy — Multi-Service Ticketing Platform

Spring Boot 3.5, Java 21, gRPC, Protobuf, PostgreSQL, FastAPI, Docker

- Engineered a cloud-ready platform across four independently scalable services (UI, API, AI, ingestion); cut data-serialization overhead **30%** with a **gRPC/Protobuf** pipeline seeding PostgreSQL in real time.

EDUCATION

Bachelor of Science in Information Technology | Mumbai University | Jul 2022 - Jun 2025

CERTIFICATIONS

- Udemy: Go (Golang) Masterclass, 2026; gRPC with Java & Spring Boot; Protocol Buffers 3; Spring Framework 6 with Spring Boot 3; Agentic AI with LangGraph & LangChain; DevOps Engineer — CI/CD, Docker, Kubernetes, AWS (2025)

AWARDS

- **Winner, Technowizz** — college-level software design and innovation competition.
- **Participant, Avishkar Research Paper Presentation** — recognized for research-oriented problem-solving.
